Manufacturer Collection 2025.
next level of innovation.

Innovation meets interior

Inspiring customers over and over again: This goal is a core part of Manufacturer DNA. True to the motto "next level of innovation", Manufacturer new features in 2025 are all about innovation, coordinated design and product perfection. After completing the extensive grid change-over for perfectly coordinates lines, in 2025 Manufacturer will raise the interiors of all of its furniture segments to the next level of innovation: The kitchen, bathroom and living segment are getting brand-new interiors.
Moreover, this Manufacturer collection is defined by modern design with genuine added value: more anti-fingerprint fronts, a new honed lacquer range, vertical wood décors, trendy bronze elements, motif niches with 3D effects you can feel, furniture with genuine wood veneer in the living segment and organic shapes in the bathroom. The 2025 collection offers an exciting selection of new décors, surfaces and designs to upgrade any room. Be it state-of-the-art technology, modern design or the dream of more individuality: Manufacturer new features offer plenty of options for meeting consumers' contemporary lifestyle needs and opening up new potential for sales in retail.

More Design. More Comfort. More Choices.

The heart of this year's collection of new features is the innovative drawer system nBOX. The nBOX system developed in close collaboration with the company Hettich sets new standards of design and aesthetics, convenience and customisation.
nBOX features a straight-lined, minimalist design in elegant slate grey. The narrow drawer frame with a width of just 10.7 millimetres melds seamlessly with the overall furniture style and is perfect for cross-room designs in kitchens, bathrooms and living rooms. From the 2025 collection on, Manufacturer product range will come standard equipped with the new and exclusive nBOX drawer system, providing premium design and technology as a new serial standard.

The hidden drawer guide and the optional push-to-open function offer a whole new level of innovation where convenience is concerned. The drawer guide rail is installed invisibly with maximum precision underneath the delicate frame. Together with the underframe technology, the narrow frame makes sure to put the available space to optimal use. The nBOX permits easy and convenient tilt angle adjustment to create a perfect gap pattern. Moreover, the hidden drawer guide slides with exceptional smoothness and offers outstanding stability.

On top of all that, the push-to-open system makes the nBOX the perfect solution for handleless designs: Effortless opening and soft, cushioned closing - pure convenience in its most beautiful form! Larder and Cargo tall units can be equipped with eTouch, making a handleless design available for these units, too.

nBOX.
One system – a world of design

To give customers the greatest possible freedom in planning, Manufacturer has created a variety of options for its new drawer system. More selection, more flexibility – the innovative nBOX pull-out system opens up a whole new world of design for kitchen planners and consumers. The nBOX system features a choice of three different variations: the serial standard with a rectangular railing, the optional design with a glass side using grey glass or the closed pull-out box.

In addition to different versions of the pull-out side equipped with a railing, glass side, or a high pull-out box, internal drawers and pull-outs also permit adaptation of the front panel for improved appearance and function. The standard design is a wooden panel, optionally available designs include a design glass panel or a closed design panel made of plastic.
For more convenience and reliability when placing orders, all new nBOX equipment options can be selected at the header level for the entire commission when placing an order.

Unique design options.
Select your style.

A small detail for great effect: The nBOX system offers brand-new unique design options in the furniture interior: For a subtle highlight or a completely new look, Manufacturer design profiles and design covers make it possible to create a wide range of design variants in three trend colours: A minimalist design in Slate grey, a tranquil natural look in Sierra oak or an exclusive extravagant style in Brushed bronze metallic.

Design profiles are fitted as a decorative strip on top to act as a beautiful eye-catcher, giving the slate grey drawers and pull-outs either a consistent visual appearance or adding a special highlight. Design covers give the entire drawer and pull-out side a completely new look, matching the overall furniture design perfectly.
Attaching and replacing covers and profiles is simple and requires no tools. With these options, nBOX has a matching interior design for any lifestyle and any space. Select your style!

Perfect match.
Perfect coordination in style and colour.

The nBOX design is the new heart of Manufacturer interior style. To create a coordinated look in the interior of Manufacturer furniture segments, Manufacturer entire interior design has seen an upgrade to a new consistent style and colour. All functional fittings and accessories were likewise adapted to the delicate contours of the frame – for a perfect match in style and colour across rooms.

The elegant premium design of the nBOX with its cubic style and slate grey hue continues into the interior of all units and pull-outs. From drawers to pull-outs, larder units and half corner units with swivel pull-outs: Manufacturer has adapted all elements of its product range perfectly to each other to create a fully coordinated look. Whether in slate grey plastic, in solid oak or slate

grey ash wood – the new cutlery trays and universal organiser systems perfectly match the nBOX style. They beautifully complement the coordination of interior organiser, carcase interior décor and nBOX.
To fully complement this look, the colour Slate grey is now optionally available as carcase interior décor.

One for all.
A perfect system for all rooms.

The new drawer system does not just look great in kitchens, but is an equally perfect visual solution for bathrooms and living rooms. That is why nBOX is now the new serial standard for all Manufacturer furniture segments. Whether architectural minimalism in Slate grey, a natural look in Sierra oak or an exclusive trend style in Brushed bronze metallic – no matter which design customers choose, nBOX has the right interior for any lifestyle and any space. That makes nBOX a functional link between rooms, underlining Manufacturer More than Kitchen approach.

Perfect from end to end.

In this year's collection, Manufacturer has added tall units with continuous fronts for a stylish upgrade in the kitchen segment. The gap-free style makes a space look clean and tranquil.
Clean lines create a harmonious and timeless appearance and underline the clear structure of wood décors with a vertical grain. Full-length doors are equipped with an integrated tension fitting in all tall unit heights.

New fronts 2025
Trends for any style.

Yet more visual highlights on all fronts are possible with Manufacturer new décors and surfaces for 2025. During development, Manufacturer focused on the design and feel, but also on added value such as durability and easy-care features. The result: the new designs feature a plethora of qualities to convince any customer. For 2025, Manufacturer is expanding its range with ten new fronts in popular top-selling and trend colours.

The successful lacquer front Senso is getting three new solid colours to respond to current trends: Olive, Sky and Black in premium honed lacquer with Manufacturer tried-and-tested anti-fingerprint technology.
The trend colour sky creates a fresh ambiance with an airy feel. Staged in a minimalist tone-in-tone design, this soft pastel hue reflects the trend of using gentle, tranquil colours.
Whether in materials or colour: The dream of a more natural ambiance increasingly defines interior design styles, particularly in urban environments. The trend colour olive – particularly when combined with Manufacturer new warm Milano walnut – reflects current trends and creates a perfect balance between love of nature and modern design.
Be it in fashion, interior design or the automotive industry: Black remains a strong trend - just like matt surfaces. Black matt designs focus on what is most important - elegance and a

timeless charm. The anti-fingerprint coating keeps Senso fronts well-maintained at all times and makes them a beautiful eye-catcher - entirely free of fingerprints.

Whether in the kitchen, bathroom or living room: Wood is a key element for great design. That is why Manufacturer has expanded its popular melamine range Structura with two vertically grained wood décors:
The new Como oak reproduction adds a fashionable eye-catcher with an elegant natural look to the Structura range. In this design, authenticity and a natural style meet a new simplicity and versatile design options: The natural, vertical grain adds a touch of modern elegance, while the soft colour gradients make it perfect for a plethora of colour and material combinations.
Modern Italian design is known for good taste and effortless, practically casual stylishness: Reflected in the new Milano walnut décor of Structura, it adds a distinct style to any space. The Structura fronts with their vertical wood grain offer a design full of character with a subtle texture and dark pores. Designs featuring Milano walnut and olive create a classy feel-good ambiance across rooms and perfectly balance a natural style with elegance and Mediterranean charm.

Innovative surfaces in perfect honed

New in Manufacturer product range: Softline in perfect honed lacquer will impress customers with advanced anti-fingerprint properties and is defined by its robustness, long life and easy-care properties. A perfect combination of beauty and function. Fronts lacquered on all sides are the ideal choice for a classy design. The special soft matt surface gives the fronts a velvety elegance, for a benefit you can see and feel! An edge radius of just 1.8 mm gives this product range a look of modern elegance.

Softline has been expanded with four top-selling colours and replaces the best-selling Fashion range with a modern upgrade. The new range is available in Alpine white, White, Ivory and Satin grey.

A new addition has also been made to the framed fronts: The Nordic lacquer range is now also available in honed sand. The new colour emphasises the Scandinavian style of the Nordic model. With elegant restraint, reduced shapes and muted natural hues, this modern Scandi look creates an amazing feel-good ambiance. This is the perfect design for all those who prefer a bright ambiance full of stylish serenity in their space.

Manufacturer new surround range offers many additional options for responding to customer requests with even greater creativity and meeting the needs of modern room design. Convenient and naturally elegant: The new worktops featuring marble, granite and wood reproduction décors are sure to impress customers with their natural look and usability. This makes them perfect for kitchen and bathroom and living room designs.

Small details with great effect: From wood look to organic shapes to modern materials like bronze - with eleven new handles from knobs all the way to bar handles there is now even more design flexibility. The popular bronze trend is the common thread running through the new design options of this collection: For handles, sinks and mixing taps, but also as a design

element in worktop décors and, of course, in the design profiles and covers of nBOX, Bronze metallic opens up a whole new world of creativity with eye-catchers in an exclusive material.

Innovation down to the smallest detail.

And innovation does not end in the kitchen niche - that's why this Manufacturer collection offers a great deal of innovation in the details. The new designs are visual highlights that are made to impress: be it digital print, motifs with 3D effects you can feel and a tactile texture, in Bronze metallic or in mirror décors - the new niche solutions offer impressive options for design.
3D motifs with a tactile texture add a whole new depth to a room design and offer visual and haptic experiences that inspire. New mirror décors create entirely new options for setting the stage in a room. They reflect light in fascinating ways, making the room feel wide-open and bright.
The niche cladding in Bronze metallic is the perfect choice for adding a touch of style to a room. For a perfect addition, Manufacturer offers the nBOX with a bronze design cover and profile, the new Xtra Hob with bronze highlights, the matching sink, tap and many other bronze elements in the new collection.

New looks, new technology!
Xtra Hob hot plate extractor fan

The success story of Manufacturer Xtra Hob hot plate extractor fan continues with two new variants in this collection: The new version with a bronze-coloured print is a response to demand for elegant elements and is fully in line with current trends. On black ceramic glass, bronze truly gets to shine and harmonises perfectly with a variety of other bronze elements in Manufacturer collection, such as design covers and profiles of the new nBOX, handles and bar handles, elements in worktop décors and niches as well as sinks and mixing taps.
At the same time, the print is so subtle that the Xtra Hob fits perfectly into any kitchen style. This gives you a plethora of options for a fully coordinated look. At the same time, the bronze-coloured elements on the Xtra Hob are so subtle that the hot plate extractor fan fits perfectly into any kitchen style.

The second new version of the Xtra Hob hot plate extractor fan in black matt combines advanced technology and elegant design. The structured surface reduces reflections by 80 %, producing a stylish matt look.
Thanks to highly robust Onyka glass by EuroKera, a unique ceramic glass material, the Xtra Hob also sets entirely new standards where function is concerned. The black matt cooktop is defined by its exceptional scratch resistance thanks to a revolutionary coating material. This guarantees that pots, pans and other kitchen utensils leave no marks during everyday use. Moreover, the easy-care surface is quick and easy to clean. Fingerprints and stains stand no chance and the hot plates remain flawlessly clean. This is real added value guaranteed to appeal to consumers in daily use.

Its special look and feel make the Xtra Hob in all its variations a perfect fit for a contemporary, open-plan living arrangement and give it an understated charm. The powerful hot plate extractor fans can be top-mounted or flush-mounted and represent the modern way of cooking

with their 2-in-1 concept. Inductive, powerful and with maximum energy efficiency – this is tomorrow's technology, available today, exclusively at Manufacturer.

New features in the appliance range

In its 2025 collection, Manufacturer once again offers its retail partners a unique appliance portfolio made by renowned brands.
2025 will see an expansion of the successful Sally edition from Bosch: another oven, an attractively-priced hot plate extractor fan and two extra-quiet dishwashers of energy efficiency class A have been added to the product range. This appealing addition to Manufacturer appliance portfolio is simply perfect for marketing with special focus on the end customer. The Sally edition is exclusively available from Manufacturer.

Manufacturer Neff and Siemens range also feature additional exclusive items: New ovens with (Slide &) Hide technology and a new dishwasher now complement the Neff range.
The new dishwasher achieves impressive drying results thanks to zeolite technology. Meanwhile Manufacturer new exclusive range by German market leader Siemens is defined by new 5-zone induction hot plates and new energy-saving dishwashers in EEC A.

As of the 2025 collection, the BORA models listed by Manufacturer will be available for all Manufacturer partners even outside BORA's selective marketing structures and can now be used even more broadly for complete marketing.

Smart Philips Hue lighting

The future of living is smart. Manufacturer new collaboration with Philips Hue reflects that trend. Together with the market leader[1] for smart lighting, Manufacturer has developed the first Philips Hue built-in furniture lights especially for kitchens. State-of-the-art technology, customisable lighting concepts and simple planning were the priorities of this joint development and now complement the range of options offered by Manufacturer.

The newly developed integrated furniture lights offer a customised lighting ambiance for any situation and user-friendly control via an app or voice commands. In addition to warm white and cold white light, these lights offer pre-set light scenarios and 16 million colours. Soft colour and brightness transitions are designed to fascinate and create a unique, colourful ambiance.

The Philips Hue lighting system is easy to operate via the Bluetooth app. The Philips Hue Bridge offers even more functions, permits voice control and is compatible with other Philips Hue products and with appliances from the Manufacturer product range, such as the exclusive Sally oven.

Philips Hue Bridge lets users control up to 50 lights in different rooms.
Be it in the kitchen, dining room or living room: The adjustable light colour creates the perfect ambiance.

Naturally unique

Manufacturer has taken the next step in its living segment by adding a range of genuine wood veneer furniture. The veneer furniture in brushed Native Oak features a delicate grain and vivid wood textures that give each piece of furniture a truly unique look. Each surface is a unique piece and practically impossible to distinguish from solid wood just by looking at it. With a warm presence and pleasant feel, the new veneer range makes any space more inviting and a true pleasure to live in.
Be it as a sideboard, glass cabinet, tall or midi unit – these genuine wood veneer pieces look beautiful as stand-alone eye-catchers or part of a coordinated plan and offer many options for fully coordinated living concepts. Stylish highlights combine beautifully with solid-coloured unit elements from Manufacturer current collection. Matching dining and coffee tables with the same veneer pattern complement the overall style.

The new veneered dining tables with a Swiss edge and a natural wood texture make for an eye-catcher full of personality. Their natural hard wax surface makes them particularly robust and ideal for daily use as a dining table. Three frame options, a variety of fixed dimensions and a pull-out version make these elegant dining tables a practical and flexible solution for different room sizes, styles and requirements. For a perfect match, the popular coffee tables Dakar and Dublin will also be available with genuine wood veneer table tops as of 2025. And there is yet another new feature: The popular stool Cross is now available in an additional height for tall counters and bars.

The Manufacturer range now also features new boat-shaped and kidney-shaped dining tables. Whether in an open-plan kitchen that transitions seamlessly to a dining area or in a separate dining room: These organic designs offer versatility in new shapes – for any style and any size of room. The table tops are available in a variety of dimensions and can be combined with the modern metal frame Centro.

Brand-new bathroom inspirations

With a natural aesthetic and functional elegance, the new features of the Manufacturer bathroom segment are perfectly adapted to current customer demands. Organic shapes, elegant wood grains and marble décors reflect the beauty of nature. Black elements add modern highlights. Sophisticated LED lighting complements the bathroom ambiance with the ideal lighting mood.

The new bathroom features are defined equally by eye-catching elements featuring console shelves and by light organic contours in the mirror and hand basin segment. In the selection of hand basins and taps, Manufacturer has focused on additional variants in black and offers a wide range for new high-contrast combinations.

Whether mounted vertically or horizontally: The oval-shaped large-surface mirror is a real eye-catcher. This wall-mounted mirror with an organic shape is illuminated around the edges and opens up new options for modern bathroom design with its gentle, rounded look. The acrylic glass top-mounted LED light emits even, soft illumination and features a slim, elegant design to adapt it to Manufacturer mirrors and mirrored cabinets. The console shelves for surface-mounted hand basins in different natural looks such as wood and marble make for an ideal combination.

Manufacturer in-house exhibition 2024

The Manufacturer in-house exhibition will take place from 21 September to 01 October 2024 in Verl. Last year, more than 15,600 people visited Manufacturer exhibition.
During the exhibition, it will also be possible to visit the Manufacturer assembly academy. Manufacturer will be providing a shuttle service so that guests can combine visits to the two locations in the most convenient manner.
